

Abstract

5 The present invention provides a new and unique
platform for authoring and deploying interactive
characters which are powered by artificial
intelligence. The platform permits the creation of a
virtual world populated by multiple characters and
objects, interacting with one another so as to create a
life-like virtual world and interacting with a user so
10 as to provide a more interesting and powerful
experience for the user. This system can be used for
entertainment purposes, for commercial purposes, for
educational purposes, etc.
